

Creating physical activity-promoting community environments: Time for a breakthrough

Author(s): Solomon LS, Standish MB, Orleans CT
Year: 2009
Journal: Preventive Medicine. 49 (4): 334-335

Abstract:

Increasing the amount of physical activity Americans get to recommended levels will require changes in community environments so that people can be more active as part of everyday life. Recent and pending federal legislation can provide the investments and other support necessary to make. These changes also positively address other major challenges we face as a nation, including climate change and the ailing economy.

Resource Description

Communication: ☒

resource focus on research or methods on how to communicate or frame issues on climate change; surveys of attitudes, knowledge, beliefs about climate change

A focus of content

Communication Audience: ☒

audience to whom the resource is directed

Public

Exposure : ☒

weather or climate related pathway by which climate change affects health

Unspecified Exposure

Geographic Feature: ☒

resource focuses on specific type of geography

None or Unspecified

Geographic Location: ☒

resource focuses on specific location

United States

Climate Change and Human Health Literature Portal

Health Impact:

specification of health effect or disease related to climate change exposure

General Health Impact

Intervention:

strategy to prepare for or reduce the impact of climate change on health

A focus of content

Mitigation/Adaptation:

mitigation or adaptation strategy is a focus of resource

Adaptation

Resource Type:

format or standard characteristic of resource

Policy/Opinion

Timescale:

time period studied

Time Scale Unspecified
